### Project 2 Description

Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## Requirements

- Two micro-controller systems: must be different 'families'!
- Programmed in C.
- Both Robot and Remote must be battery powered.
- Discrete MOSFET drivers.
- Metal detector.
- Remote must have display, speaker, and joystick or equivalent.
- Radio Communication using JDY-40 or

## Coin Picking Robot

- Here is my robot picking coins in automatic mode. I used the EFM8 board.

<https://bit.ly/2HmJcAr>

3

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## Getting Started with a New Microcontroller System

1. Obtain/assemble the hardware. Also documentation: datasheets & manuals.
2. Obtain/install the development environment. Also documentation like manuals.
3. Obtain/install a means of putting the 'firmware' in the hardware. May require additional hardware tools and software.
4. Settle a workflow. Also: examples, application notes, and forums.

4

Project 2 Description

## Getting Started with a New Microcontroller System

- In this course is not too difficult. Instructions provided for:
  - STM32L051: LQFP32. 64k flash. Microchip. ARM architecture.
  - LPC824: TSOP 20. 32k flash. NXP. ARM architecture.
  - PIC32MX130: DIP-28. 64k flash. Microchip. MIPS architecture.
  - ATmega328p: DIP-28. 32k flash. Atmel/Microchip. AVR architecture.
  - MSP430G2553. DIP-20. 16k flash. Texas Instruments. MSP430 architecture.

5

Project 2 Description

## Micro-controller System with USB and 9V Battery

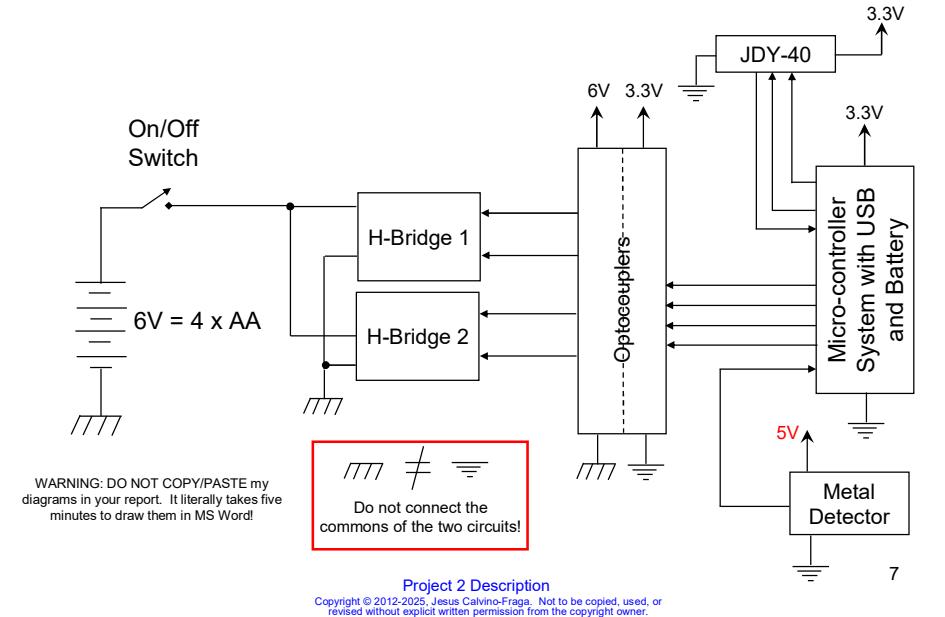

**WARNING:** Filtering and decoupling capacitors not shown. Check the LM7805 and MCP1700 datasheets for info about capacitors.

Note: One of the microcontroller systems can work directly with 5V.

6

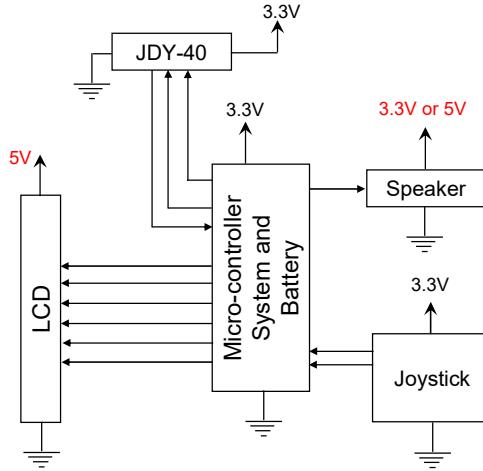

## ROBOT block diagram

## Considerations for the Robot Micro-controller

- Make sure you have available (at a bare minimum) and know how to use at the same time in the ROBOT micro-controller system:
  - 4 digital outputs to control the motors using PWM (4 pins)
  - Extra TXD/RXD and SET pins for JDY-40 (3 pins)
  - 1 Digital input for the metal detector (1 pin)
  - 2 Analog inputs for the perimeter detector (2 pins)
- I think all the processors provided meet the minimum requirements

## Remote block diagram

WARNING: DO NOT COPY/PASTE my  
diagrams in your report. It literally takes five  
minutes to draw them in MS Word!

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or  
revised without explicit written permission from the copyright owner.

9

## Considerations for the REMOTE Micro-controller.

- Make sure you have available (at a bare minimum) and know how to use at the same time in the REMOTE micro-controller system:
  - 6 digital outputs for LCD (6 pins)
  - Extra TXD/RXD and SET pins for JDY-40 (3 pins)
  - 2 analog inputs for Joystick (2 pins)
  - 1 output for the speaker (1 pin)
- I think all the processors provided meet the minimum requirements

revised without explicit written permission from the copyright owner.

10

## The Inductors in project Kit 2

- DigiKey part number M8275-ND

Don't drop the inductor.  
The ferrite core may break!

|                 |            |
|-----------------|------------|
| Type            | Wirewound  |
| Material - Core | Ferrite    |
| Inductance      | 1mH        |
| Tolerance       | $\pm 20\%$ |
| Current Rating  | 1A         |
| DC Resistance   | 0.55 Ohms  |

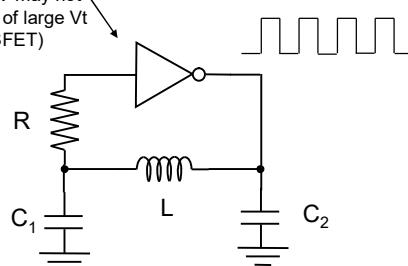

Two used for the perimeter detector, one used in the metal detector.

11

Project 2 Description

## Basic Metal Detector: Colpitts Oscillator.

Tip: To save space make your own CMOS inverter!  
(Use 5V. 3.3V may not work because of large  $V_t$  of PMOSFET)

$$C_T = \frac{C_1 C_2}{C_1 + C_2}$$

$$f = \frac{1}{2\pi\sqrt{LC_T}}$$

R=100Ω to 1kΩ

C<sub>1</sub>=1nF to 10nF

C<sub>2</sub>=10nF to 100nF

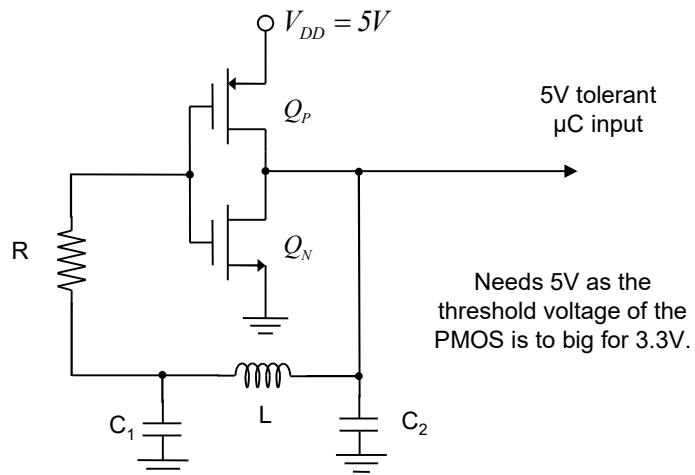

L=1mH

If you place metal close to the inductor, it will change the magnetic field, slightly changing the inductance which is reflected as a change in the oscillator frequency.

## Basic Perimeter Detector

15

## Very Simple Perimeter Detector

16

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## Coin Picking Area

- At least 0.5 m<sup>2</sup>.
- I used a “Con-Tact Simple Elegance Non Adhesive Shelf Liner - Clear Diamonds - 60 Inches x 20 Inches” from Home Depot (\$16.85). It has several advantages:
  - Good grip.
  - Easy to roll and transport.
  - Fits perfectly in the lab benches.
  - Easy to clean.

17

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## Coin Picking Area Surface

The screenshot shows the product page for the Con-Tact Simple Elegance Non Adhesive Shelf Liner. The product image is a light blue diamond-patterned sheet. The price is listed as \$18.62 each. Availability information indicates 19 in stock at Vancouver Cambie. Delivery options include free in-store pickup and scheduled delivery. A postal code input field shows 'A1A 1A1'.

18

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## Perimeter Signal Source

- Either use:
  - Function generator in the lab.
  - 555 Timer in A-stable configuration. I like this option better because allows you to setup your perimeter anywhere you want. I connected the output of the 555 timer in series to the perimeter wire using a  $47\Omega$  resistor. Used 9V battery to power the 555 timer.

## Robot Construction

| Part #          | Description                                       |
|-----------------|---|
| Solarbotics GM4 | Gear Motor 4 - Clear Servo                        |
|                 | 3D printed wheels (two)                           |
| Tamiya 70144    | Ball Caster                                       |
| 4 x AA          | Battery holder                                    |
| 1 x 9V cable    | 9V battery clip                                   |
|                 | Aluminum chassis made using the water jet cutter. |

20

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

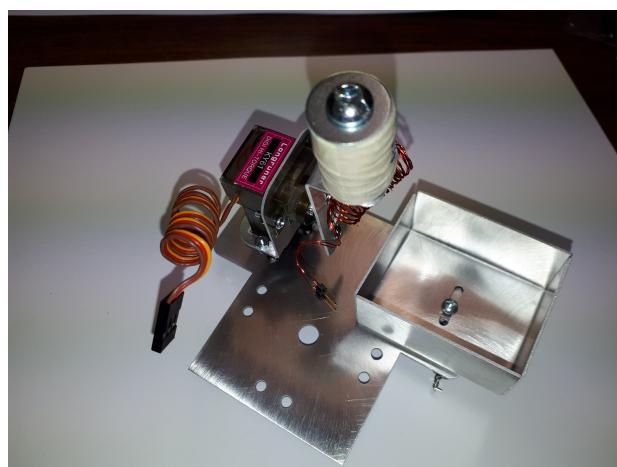

## Robot Construction

- Instruction posted in Canvas:
  - How to assemble the complete robot.
  - How to make the metal detector inductor.
  - How to make the electromagnet.
- You'll need to figure out the electronics and software yourself (as a team!).

21

Project 2 Description

## JDY-40 Radio

- Needs three pins: TXD, RXD, and SET.
- Use at low baud rates. 9600 baud top.
- Power ONLY with 3.3V. Be super careful with voltage polarity.
- Set an unique device ID to your JDY-40 pair using this 'AT' command:  
`SendATCommand("AT+DVIDxxxx\r\n");`  
Where xxxx is 0000 to FFFF (in hex)
- Example for the EFM8 provided on Canvas.

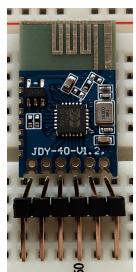

24

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## JDY-40 Radio Pins

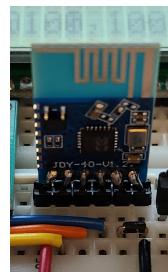

PROBLEM: JDY-40 pins are 2mm apart.  
Bread board holes are 2.54mm apart.

Solution step 1:  
bend the  
header pins so  
that they match  
the JDY-40  
holes spacing.

Solution step 2:  
Solder header  
on top.

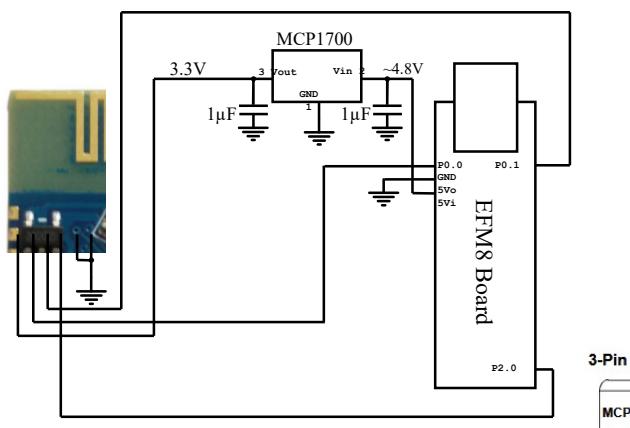

Solution step 3:  
Plug board into  
bread board

25

revised without explicit written permission from the copyright owner.

## JDY-40 Radio Wiring: ATMega328P

27

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

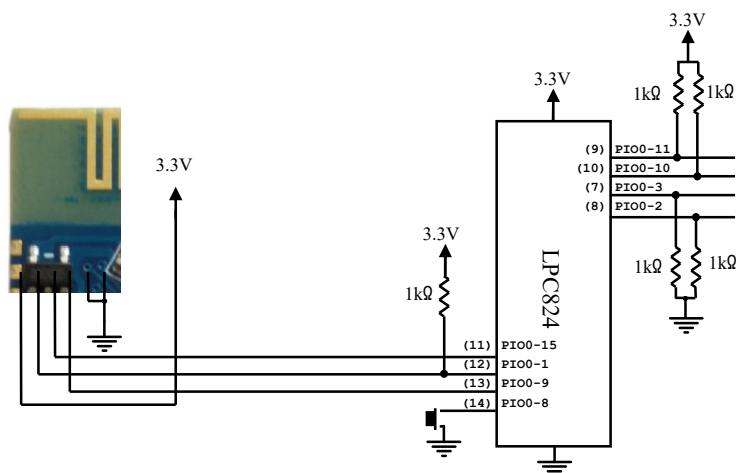

## JDY-40 Radio Wiring: MSP430G2553/MSP430G2253

28

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

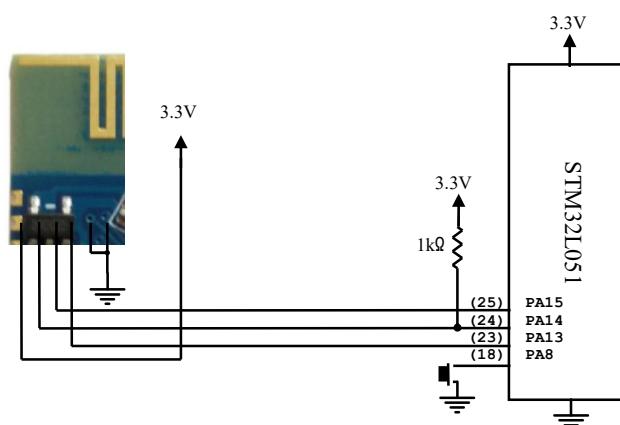

## JDY-40 Radio Wiring: LPC824

29

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

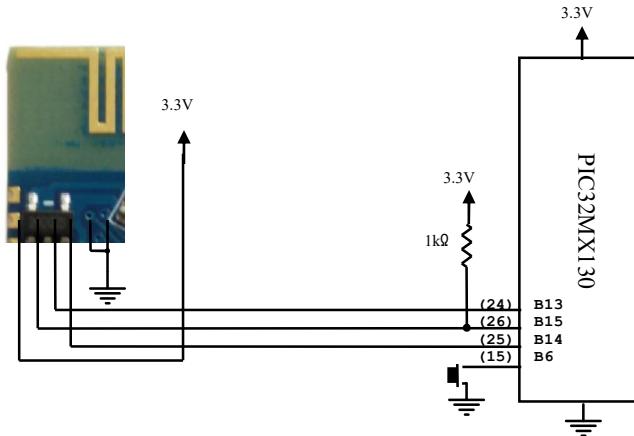

## JDY-40 Radio Wiring: STM32L051

30

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## JDY-40 Radio Wiring: PIC32MX130

31

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

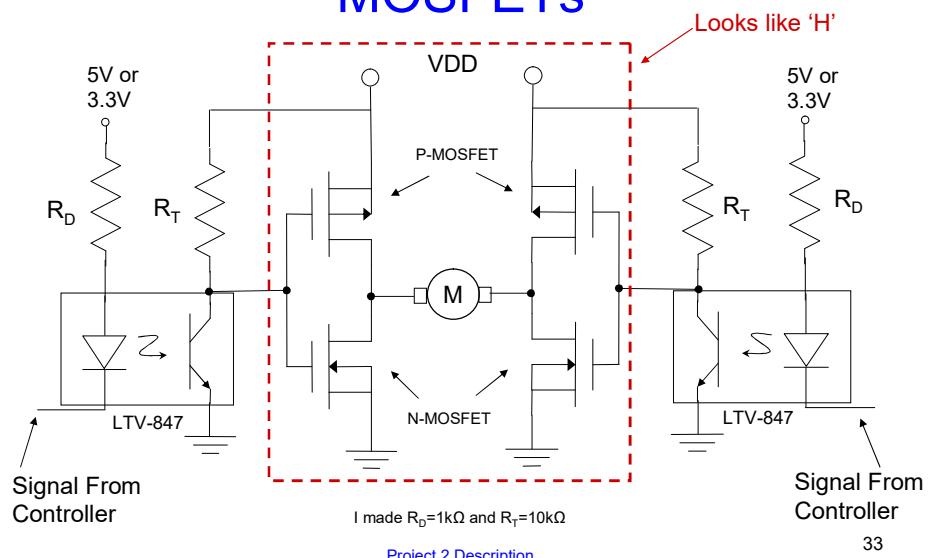

## Communicating with the JDY-40

- Ideally the micro-controller connected to the JDY should have a dedicated HARDWARE UART (serial port).
- The only two micro-controllers that don't have an extra UART are the ATMega328p and the MSP430G2553. One excellent solution: timer ISR UART (used in the examples provided).
- Examples posted on Canvas.

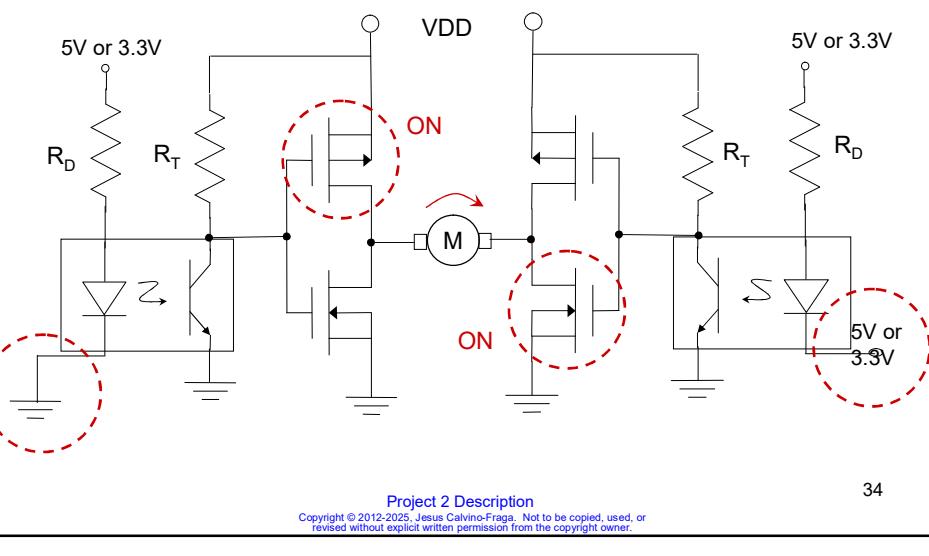

32

# H-Bridge with Optocouplers and MOSFETs

## H-Bridge with Optocouplers and MOSFETs CW Rotation

## H-Bridge with Optocouplers and MOSFETs CCW Rotation

35

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## Optocouplers

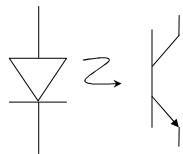

- An optocoupler is a combination of a light source and a photosensitive element
- You can use an optocoupler when you want to isolate high or very high voltages, inductive circuits, or “noisy” circuits from the microcomputer system.
- The typical optocoupler consists of an infrared LED and a NPN BJT.
- The BJT usually doesn’t have a base pin! Instead it is the light from the LED what is used to saturate the transistor.

36

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## Designing with Optocouplers

- When designing with optocouplers you take into consideration the following parameters:

Some optocouplers include a base pin!

- The current transfer ratio (CTR) is a parameter similar to the DC current amplification ratio of a transistor ( $\beta$ ) and is expressed as a percentage indicating the ratio of the output current ( $I_C$ ) to the input current ( $I_F$ ).  
 $CTR(\%) = (I_C/I_F) \times 100$
- The Diode forward voltage (1.2 to 1.4V).
- The maximum diode forward current (around 50mA max).
- The BJT saturation voltage (0.1 to 0.4V).
- The voltage isolation between the diode and the transistors (a few hundred volts to thousands of volts)

37

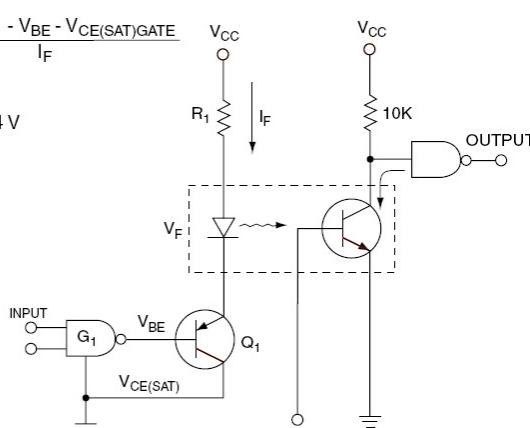

Project 2 Description  
 Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## Optocouplers circuits

$$R_1 = \frac{V_{CC} - V_F - V_{BE} - V_{CE(SAT)GATE}}{I_F}$$

$$V_{BE(Q_1)} = 0.6 \text{ V}$$

$$V_{CE(SAT)(Q_1)} = 0.4 \text{ V}$$

This is from AN-3001,  
 Fairchild Semiconductors

38

Project 2 Description  
 Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## LTV-846/LTV-847 Optocoupler

- CTR=50%
- Diode forward voltage=1.4 max.
- Maximum diode forward current is 50mA
- The BJT saturation voltage is less than 0.12V!
- Voltage isolation 5000V<sub>RMS</sub>

39

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

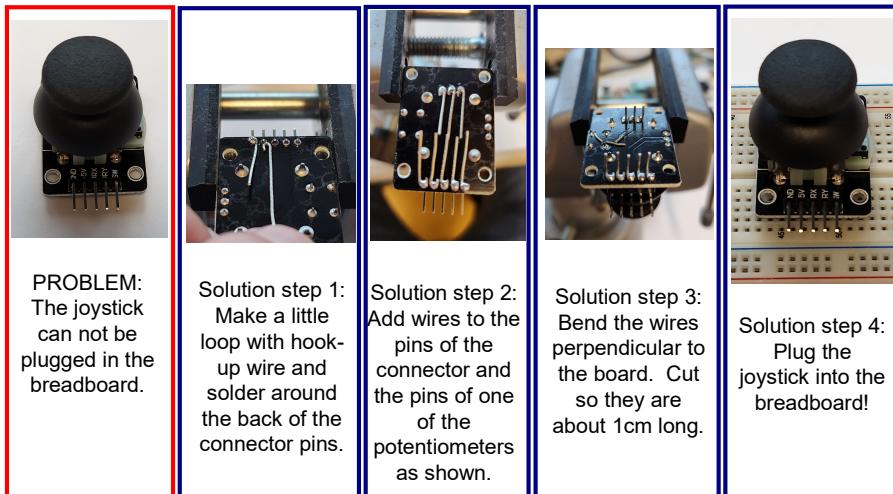

## Why you may need Optocouplers?

- To interface the low voltage of the microcontroller to the high voltage of the motors.
- To keep the ‘noise’ from the motors away from the microcontroller and the metal detector circuit.
- It could be possible to not use optocouplers this year... I hadn't tested that yet.

40

Project 2 Description  
Copyright © 2012-2025, Jesus Calvino-Fraga. Not to be copied, used, or revised without explicit written permission from the copyright owner.

## Joystick

**PROBLEM:**  
The joystick  
can not be  
plugged in the  
breadboard.

Solution step 1:  
Make a little  
loop with hook-  
up wire and  
solder around  
the back of the  
connector pins.

Solution step 2:  
Add wires to the  
pins of the  
connector and  
the pins of one  
of the  
potentiometers  
as shown.

Solution step 3:  
Bend the wires  
perpendicular to  
the board. Cut  
so they are  
about 1cm long.

Solution step 4:  
Plug the  
joystick into the  
breadboard!

41

## Battery powered.

- Both the robot and the remote must be battery powered.
- Both a couple of 9 volt battery straps and a 4 x AA battery holder are included in the parts kit for this project.
- You can use any kind of batteries you want, provided that you acquire the batteries and the holders yourself.
- **WARNING:** batteries are neither included in the parts kits nor they will be provided in the lab. You must buy your own batteries.
- Brand name batteries have lower internal resistance, but they are more expensive.

42
